Academic Program and Course Description Guide

2024-2025

Introduction

The educational program is considered a coordinated and organised package of courses that includes procedures and experiences structured into study subjects. Its primary purpose is to build and refine the graduates' skills, making them qualified to meet the requirements of the labour market. The program is reviewed and evaluated annually through internal or external auditing procedures and programs, such as the external examiner program.

The academic program description provides a concise summary of the program's main features and its courses, outlining the skills students are expected to acquire in relation to the program's objectives. The importance of this description lies in the fact that it represents the cornerstone for obtaining program accreditation. It is prepared collaboratively by the teaching staff under the supervision of scientific committees within the departments.

This second edition of the guide features an updated description of the academic program, revised in light of recent developments in the Iraqi educational system. It covers both traditional systems (annual and semester-based) as well as the Bologna Process description model, adopted according to the Directorate of Studies circular T.M3/2906 dated 3 May 2023.

We emphasise the importance of preparing descriptions of academic programs and courses to ensure the proper conduct of the educational process.

Concepts and Terminology

- **Academic Program Description:** A concise summary of the program's vision, mission, and objectives, including an accurate description of the intended learning outcomes based on specific learning strategies.
- **Course Description:** A brief overview of the main characteristics of the course and the expected learning outcomes that students should achieve, indicating whether they have maximised the benefits of the available learning opportunities. It is derived from the program description.
- **Program Vision:** An ambitious outlook for the future of the academic program, aiming to be advanced, inspiring, motivating, realistic, and applicable.
- **Program Mission:** A clear outline of the objectives and activities required to achieve them, as well as identifying the program's development paths and directions.
- **Program Objectives:** Statements describing what the academic program intends to achieve within a specific timeframe; they should be measurable and observable.

- **Curriculum Structure:** All courses included in the academic program according to the adopted learning system (semester, annual, Bologna Process), whether required by the ministry, university, college, or department, along with the number of credit units.
 - **Learning Outcomes:** A consistent set of knowledge, skills, and values acquired by the student upon successful completion of the academic program. Learning outcomes must be specified for each course in a way that aligns with the program's objectives.
 - **Teaching and Learning Strategies:** Strategies used by faculty members to develop students' learning. They are plans designed to achieve learning objectives and include both classroom and extracurricular activities.
-

Academic Program Description Form

University Name: Northern Technical University

Faculty: Technical Engineering College

Scientific Department: Electrical Engineering Techniques

Academic or Professional Program Name: Bachelor of Electrical Engineering Technology

Final Certificate Name: Bachelor of Electrical Engineering Technology

Academic System: Bologna

Description Preparation Date: 30/09/2024

File Completion Date: 03/10/2024

Signature:

Head of Department Name:

prof. Dr. Mohammed Yahya Suliman

Date:

Signature:

Scientific Associate Name:

Assist Prof. Dr. Mohammed Subah Jarjes

Assist. Lecturer Wargaa Hashim Mahmood

Approval of the Dean

1. Program Vision

Keeping pace with scientific progress in all fields of electrical engineering technologies by preparing engineers with strong scientific and practical capabilities.

2. Program Mission

The department aims to produce competent and effective engineers who possess the technical and engineering skills necessary in the field of electrical power to serve society's needs and meet the requirements of both governmental and private sector projects.

3. Program Objectives

1. Prepare technical engineers capable of engaging in various technical fields of electrical power engineering.
2. Strengthen the technical aspect of graduates by increasing practical and technical units without conflicting with theoretical foundations.
3. Qualify graduates in line with labour market requirements.
4. Keep pace with modern global developments in curricula and study plans with emphasis on practical aspects.
5. Enhance performance standards to ensure the application of international standards in electrical engineering technologies.

4. Program Accreditation

Ministry of Higher Education Science Program

5. Other external influences

Fourth/First	EET403	Power Generation Substation	3	2
Fourth/First	EET404	Control System Analysis	3	2
Fourth/First	EET405	Project 1	0	2

Fourth/Second	EET406	Professional ethics	2	0
Fourth/Second	EET407	Power System Protection	2	2
Fourth/Second	EET408	Power System Stability	2	2
Fourth/Second	EET409	High Voltage Technique	2	2
Fourth/Second	EET410	Project 2	0	2

8. Expected learning outcomes of the program	
Knowledge	
1. Perform mathematical calculations and design electrical circuits using computers, and study the economic feasibility of various projects in the field of specialisation. 2. Diagnose faults and perform maintenance and repair work on electrical stations for industrial and service purposes. 3. Conduct research and studies and explore alternatives in the field of specialisation using the latest technologies. 4. Design electrical stations and transmission systems using various manufacturing methods to achieve maximum efficiency.	
Skills	
1. Perform mathematical calculations and design electrical circuits. 2. Conduct non-destructive analysis and testing of electrical equipment. 3. Conduct experiments and failure tests of equipment. 4. Ability to reason and analyse.	

Ethics	
1- Developing students' ability to share ideas. 2- Developing the basic skills necessary to design, implement, and maintain laboratory systems and projects. 3- Demonstrate a broad appreciation of the problems that may arise in professional practice, including teamwork, leadership, occupational safety, professional conduct and ethics, and economic feasibility. 4- The ability to analyse, deduce, and solve problems in an engineering manner according to required standards.	Summer and professional training, laboratories, scientific films and videos (electronic and in-person), blended learning, and graduation projects.

9. Teaching and Learning Strategies
• Delivering detailed explanations of scientific material to students. • Engaging students in solving mathematical problems. • Conducting discussions and debates on relevant topics. • Daily quizzes, mid-term exams, final exams, weekly reports, and descriptive homework assignments.

10. Evaluation methods
• Daily quizzes. • Mid-term exams. • Final exams. • Weekly reports related to the course. • Descriptive homework assignments.

11. Faculty						
Faculty Members						
Academic Rank	Specialization		Special Requirements/S kills (if applicable)		Number of the teaching staff	
	General	Special			Staff	Lecturer
Professor	Electrical Engineering	Power and machine	N/A		7	0
Asst. Prof.	Electrical Engineering	Power and machine			18	0
Lecturer	Electrical Engineering	Power and machine			5	0
Asst. Lect.	Electrical Engineering	Power and machine			6	0

Professional Development	
Mentoring new faculty members	
o	Teamwork skills.
o	Computer and internet skills.
o	Communication skills, such as the English language and presentation.
o	Leadership skills and responsibility.
o	Self-learning and lifelong learning skills.
Professional development of faculty members	
o	In-house training courses.

- o External training courses.
- o Scientific research, seminars, and workshops.
- o Self-directed learning.

12. Acceptance Criterion

- Scientific branch (students from a scientific background).
- Vocational studies branch.
- Minimum grade point average requirement.

13. The most important sources of information about the program

- Official textbooks (course references).
- Supplementary resources (internet).
- Scientific research and latest publications.

14. Program Development Plan

- Reviewing and adopting experiences from peer universities and colleges (both Arab and international) and benefiting from their academic advancements.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	1-Understanding the Fundamentals: The primary objective of a DC circuits course is to provide students with a solid foundation in the fundamental principles of direct current (DC) circuits. This includes concepts such as voltage, current, resistance, Ohm's law, power, and energy. 2-Analyzing Circuit Components: Students will learn how to analyze and work with various circuit components. They will understand their behavior in DC circuits and be able to calculate their effects on voltage, current, and power. 3-Circuit Laws and Theorems: Students will become familiar with important laws and theorems governing DC circuits, including Ohm's law, Kirchhoff's laws (KCL and KVL), Thevenin's theorem, Norton's theorem, and maximum power transfer theorem. They will gain proficiency in applying these principles to solve complex circuit problems. 4-Circuit Simulation and Design: The course may involve introducing students to circuit simulation software. They will learn how to use simulation tools to analyze and design DC circuits, verify their calculations, and gain practical insights into circuit behavior.
--	--

	5-Problem-Solving Skills: An important objective is to develop students' problem-solving skills in the context of DC circuits. They will learn how to analyze circuit diagrams, formulate appropriate strategies, and apply their knowledge to solve a variety of circuit problems efficiently. 6-Laboratory Skills: The course includes hands-on laboratory experiments to provide students with practical experience in building, testing, and troubleshooting DC circuits.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1-Fundamental Knowledge: Students will acquire a solid understanding of the fundamental concepts and principles of direct current (DC) circuits, including voltage, current, resistance, power, and energy. 2-Circuit Analysis Skills: Students will develop the ability to analyze DC circuits using various techniques such as applying Kirchhoff's laws, performing nodal and mesh analysis, and utilizing circuit theorems like Thevenin's and Norton's theorem. They will gain proficiency in solving complex circuit problems and calculating circuit parameters. 3-Circuit Design and Simulation: Students will be able to design and simulate DC circuits, using appropriate components and considering design constraints. They will learn to use circuit simulation software to verify their designs, analyze circuit performance, and troubleshoot circuit issues. 4-Laboratory Skills: Through hands-on laboratory experiments, students will develop practical skills in building, testing, and troubleshooting DC circuits. They will become proficient in using measuring instruments, interpreting experimental data, and ensuring safety precautions while working with electrical circuits. 5-Critical Thinking and Analysis: The course will promote critical thinking and analytical skills among students. They will learn to evaluate different circuit solutions, analyze circuit behavior, and make informed decisions based on their understanding of DC circuits. By the end of the course, students will possess a comprehensive knowledge of DC circuits, enabling them to analyze, design, and troubleshoot a wide range of electrical circuits. They will be prepared for further studies in electrical engineering or related fields and equipped with skills that can be applied in professional practice.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: • <u>Part A – General Electric System.</u> Constituent parts of an electrical system (source, load, communication & control), Current flow in a circuit, Electromotive force and potential difference, Electrical units. Ohm's law, Resistors, Resistivity, Temperature rise & Temperature coefficient of resistance, Voltage & Current sources [8 hrs] • <u>Part B DC circuits.</u> Series circuits, Parallel circuits. Kirchhoff's laws. Power and energy [14 hrs] • <u>Part C Network Theorems</u> . Star-delta & delta-star transformation. Sources transformations Mesh analysis. Nodal analysis. Superposition theorem. Thevenin's theorem. Norton's theorem. Maximum power transfer theorem. [32 hrs] • Revision problem classes [6 hrs]
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1-Hands-on Experiments: Engage students in practical experiments to deepen their understanding of circuits. 2-Simulation Software: Use circuit simulation software for virtual circuit design and analysis. 3-Problem-solving Exercises: Include various problem-solving exercises to apply circuit analysis techniques. 4-Group Projects: Assign collaborative projects for circuit design and construction. 5-Real-world Applications: Discuss practical applications of circuits in different devices and systems. 5-Interactive Discussions: Encourage student participation and critical thinking through open-ended questions. 6-Conceptual Understanding: Focus on intuitive understanding alongside mathematical analysis.

7-Assessment Variety: Use diverse assessment methods to gauge student understanding.
8-Office Hours and Support: Offer individualized assistance through office hours or online support.

Delivery Plan (Weekly Syllabus)

المنهاج الأسبوعي النظري

Week	Material Covered
1	Fundamental electric quantities: voltage, current, power and energy
2	- Resistance, capacitance and inductance - Dependent and Independent source.
5	- Series and parallel resistors - voltage and current division
6	Kirchhoff's laws (KVL & KCL).
7	Conversion of delta-connected resistance into an equivalent Wye connection & vice versa.
8,9,10	- Mesh analysis - Node analysis
11	Superposition's theorem.
12,13	- Thevenin's theorem - Norton's theorem.
14	Maximum power transfer.
15	Final Examination

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الأسبوعي للمختبر

Week	Material Covered

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Objectives أهداف المادة الدراسية	1-Training students on the basics of logical circuits used in electronic computers and how they work. 2- Building logical circuits and learning about computer operation.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	- Learning about the different number systems. - Learning the arithmetic operations related to different number systems. - Learning the different logic gates of computer system and their work. - Ability to design, simplify and implement different logical and arithmetic circuits that considered the basic of digital system. - Ability to design, simplify and implement different sequential circuits, counters and shift registers.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: <u>Part 1 – Numbers Systems, Operations, and Codes</u> Different Number Systems, Data representation (integer and fraction) using different number systems. Conversion Between Different Numbers Systems. Arithmetic operations using different number systems, and Digital Codes (BCD, Parity, Gray, etc.) [10 hrs] <u>Part 2- Logic Gates</u> The Inverter (NOT Gate), AND Gate, OR Gate, NAND Gate, NOR Gate, the Exclusive-OR Gate and Exclusive-NOR Gates. [8 hrs] <u>Part 3 Boolean Algebra and Logic Simplification</u> Boolean Operations and Expressions, Laws and Rules of Boolean Algebra, Simplification Using Boolean Algebra, DeMorgan's theorems, The Karnaugh Map (1, 2, 3 and 4 variables), SOP and POS Minimization. [8 hrs] <u>Part 4 Combinational Logic Analysis</u> Basic Combinational Logic Circuits, Implementing Combinational Logic, Combinational Logic Using NAND and NOR Gates, Logic Circuit Operation with Pulse Waveform Inputs. [10 hrs] Revision problem classes [10 hrs] <u>Part 5 – Functions of Combinational Logic</u> • Half, Full and Parallel Binary Adders and Subtractors. 1's and 2's Complement Subtractor, 2's Complement Adder-Subtractor, BCD Adder, etc. Comparators, Decoders, Encoders, Multiplexers, Demultiplexer [10 hrs] <u>Part 6- Latches, Flip-Flops, and Timers.</u> • Latches, Edge-Triggered Flip-Flops. Flip-Flop operating (R-S, T, J-K, D) [12 hrs] <u>Part 7 Counters</u> • Synchronous Counters, Asynchronous Counters. Design of Counters. [8 hrs] <u>Part 8 Shift Registers</u> • Basic Shift Register Operations: SISO, SIPO, PISO, PIPO, Bidirectional and special Types Shift Register. [6 hrs] Revision problem classes [6 hrs] <u>Part 9– Microprocessor</u> Introduction to Microprocessor: component of microprocessor, Microprocessor architecture [6 hrs]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies

The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering types of simple experiments involving some sampling activities that are interesting to the students.

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

Week	Material Covered
Week 1	Introduction - Difference between Circuit Theory and Field Theory
Week 1	• General number formula: Binary, octal, decimal and hexadecimal numbers
Week 2	• Arithmetic operations in different number system
Week 3	• complements, binary codes, BCD, Ex-3, Gray codes
Week 4	• Basic definitions, basic theorem and properties, Boolean functions
Week 5	• Canonical and Standard forms Digital Logic Gates
Week 6	• Karnaugh Maps: AND- OR implementation, don't care conditions
Week 7	• Subtractions, half and full adders and subtractions, binary parallel address
Week 8	• decoders, encoders, comparators
Week 9,10	• multiplexers and demultiplexers
Week 11	• Flip-flops (RS, T, D, JK ...) • Master slave FF, counter • shift registers
Week 12,13	• Introduction to Microprocessor • Microprocessor architecture
Week 14	• component of microprocessor
Week 15	• Final Examination

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

Week	Material Covered
Week 1	• Lab 1: Introduction to digital laboratory kit operation • Lab 2: Logic Gates (AND, OR, NOT, NAND, NOR).
Week 2	• Lab 3: Logic Gates (XOR, XNOR). • Lab 4: De Morgan's Theorems 1 st and 2 nd Laws.
Week 3	• Lab 5: Designing a combinational Logic circuit. • Lab 6: The realization of the Boolean equation.
Week 4	• Lab 9: Half Binary Subtractor. • Lab 10: Full Binary Subtractor.
Week 5	• Lab 11: Binary comparator
Week 6	• Lab 12: 2's Complement Adder- Subtractor
Week 7	• Lab 13: Flip-Flop.

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	1. To explore further and confirm the reference of engineering drawing to the varied design applications found in engineering and technology in general. 2. To further the ability to communicate information by engineering drawings. 3. To develop knowledge to two dimensional (2D) computer-aided drawing(CAD). n Further and/or Higher Education who are required to learn how to use the computer-aided design (CAD) software package AutoCAD®
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	6. Learning types of engineering lines and their uses and how to draw 7. Drawing geometric shapes such as square, rectangular, parallelogram and circle 8.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: • <u>Part A – AutoCAD interface</u> Setup, save, limits, grid, object snap and ortho mode [3 hrs.] • <u>Part B- Coordinate method</u> Direct distance method, Absolute coordinate, Relative coordinate, Polar coordinate[3hrs] • <u>Part C Draw menu</u> Line, polyline, rectangle, arc, circle, ellipse and hatch [12hrs] • <u>Part D Modify and Properties menu</u> Copy, move, offset, erase, extend, trim and array, line shape and line size [9 hrs.] • <u>Part D Projection</u> <u>Front, side and top ortho projections [6 hrs.]</u> • <u>Part E stereoscopic shapes</u> <u>Method for drawing stereoscopic shapes[6hrs]</u> Revision problem classes [8 hrs.]

Learning and Teaching Strategies

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	To teach the students: 1-Derivatives of trigonometric functions 2- Partial differentiation and Total differential 3- limit and derivative concepts 4- The Fundamental Theorem of Calculus, 5-Indefinite Integrals and the Net Change Theorem.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Learning about the complex numbers. 2. Learning the Functions of several variables. 3. Learning the Lines and planes in space, Tangent and normal in the plane 4. Learning the Triple integrals in rectangular coordinates 5. Double Integral in rectangular and polar form, Areas and volumes 6. Applications (Surface Area, Green's theorem and Stokes' theorem)
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: ❖ <u>Complex Numbers</u>– For most students the assumptions I've made above about their exposure to complex numbers is the extent of their exposure. Problems tend to arise however because most instructors seem to assume that either students will see beyond this exposure in some later class or have already seen beyond this in some earlier class. Students are then suddenly expected to know more than basic arithmetic of complex numbers but often haven't actually seen it anywhere and have to quickly pick it up on their own in order to survive in the class. [13 hrs] ❖ <u>Vector Fields</u> – In this section we introduce the concept of a vector field and give several examples of graphing them. We also revisit the gradient that we first saw a few chapters ago. Line Integrals – Part I – In this section we will start off with a quick review of parameterizing

	curves. This is a skill that will be required in a great many of the line integrals we evaluate and so needs to be understood. We will then formally define the first kind of line integral we will be looking at : line integrals with respect to arc length. Line Integrals – Part II – In this section we will continue looking at line integrals and define the second kind of line integral we'll be looking at : line integrals with respect to x, y, and/or z. We also introduce an alternate form of notation for this kind of line integral that will be useful on occasion. Line Integrals of Vector Fields – In this section we will define the third type of line integrals we'll be looking at : line integrals of vector fields. We will also see that this particular kind of line integral is related to special cases of the line integrals with respect to x, y and z. [20 hrs] ❖ <u>Part D: Multiple Integrals</u> - In this chapter will be looking at double integrals, i.e. integrating functions of two variables in which the independent variables are from two dimensional regions, and triple integrals, i.e. integrating functions of three variables in which the independent variables are from three dimensional regions. Included will be double integrals in polar coordinates and triple integrals in cylindrical and spherical coordinates and more generally change in variables in double and triple integrals.[20 hrs] ❖ Revision problem classes [6 hrs]

Delivery Plan (Weekly Syllabus)

المنهاج الأسبوعي النظري

Week	Material Covered
------	------------------

Week 1	Equation of the straight line, Trigonometric functions and their sketches. Domain, Range, Inverse of functions, Absolute value, limits, Limits applications, Polar coordinates, Conic sections
Week 2	Differential calculus: Methods of differentiation, Some applications of differentiation
Week 3	Derivatives of trigonometric functions, inverse trigonometric
Week 4	Partial differentiation, Total differential, rates of change and small changes Maxima, minima and saddle points for functions of two variables
Week 5	Theory of matrices and determinants. Properties of matrix operations, matrix transpose, matrix inverse, Applications to linear equations, Cramer's Rule. Eigen values and eigenvectors
Week 6	Derivatives of Logarithmic and exponential functions
Week 7	Hyperbolic functions, Relation between the hyperbolic functions and exponential functions
Week 8	Derivative of hyperbolic functions
Week 9	Sigma Notation, Areas and Distances, The Definite Integral. The Fundamental Theorem of Calculus, Indefinite Integrals and the Net Change Theorem, The Substitution Rule
Week 10	Trigonometric Integrals, Trigonometric Substitution, Partial Fractions and Improper Integrals
Week 11,12	Integration using Tables and Computer Algebra Systems CAS, Numerical Integration (Trapezoidal Approximation, Midpoint Approximation, Simpson's Approximation, and Error Bounds)
Week 12	Areas between Curves, Volume, Volumes by Cylindrical Shells Average Value of a Function (Mean Value Theorem), Arc Length
Week 13	Applications to Physics and Engineering and Probability
Week 14	Final exam

Relation with other Modules العلاقة مع المواد الدراسية الأخرى				
Prerequisite module	None		Semester	
Co-requisites module	None		Semester	
Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية				
Module Objectives أهداف المادة الدراسية	Module Objectives for Engineering Mechanics/Statics: 1. Understand the fundamental concepts and principles of Statics, including motion, forces, and acceleration. 2. Apply kinematic equations to analyze the motion of particles and rigid bodies in various scenarios. 3. Determine the relationship between forces, mass, and acceleration using Newton's laws of motion. 4. Apply the principles of work and energy to analyze and solve dynamic problems. 5. Analyze and calculate linear and angular momentum, and apply the principle of impulse and momentum to dynamic systems. 6. Understand and apply the principles of vibrations and oscillations in mechanical systems.			
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Apply fundamental concepts of engineering mechanics/statics to analyze and solve problems related to the equilibrium of rigid bodies. 2. Demonstrate a deep understanding of vector mathematics and its application in statics, including vector addition, subtraction, dot product, and cross			

	product. 3. Apply the principles of static equilibrium to solve problems involving forces and moments acting on rigid bodies in two and three dimensions. 4. Analyze and calculate the internal forces, such as axial forces, shear forces, and bending moments, in statically determinate structures using methods such as the method of sections and the method of joints. 5. Utilize free-body diagrams to model and analyze the forces acting on a structure or a rigid body, and determine the resultant forces and moments at specific points. 6. Analyze and calculate the centroid and moment of inertia of various two-dimensional shapes, including rectangles, triangles, and circles, and apply these concepts to determine the stability and strength of structures. 7. Apply the concepts of friction and its effects on the equilibrium of bodies in statics, including calculating static and kinetic friction forces and determining the angle of friction. 8. Analyze and calculate the forces in trusses and frames, including the method of joints and the method of sections, and determine the stability and structural integrity of these systems. 9. Apply the principles of equilibrium to solve real-world engineering problems, such as determining the stability of structures, calculating the forces on supports and connections, and analyzing the behavior of mechanical systems. 10. Communicate effectively, both orally and in writing, to present and explain the analysis, results, and solutions of engineering mechanics/statics problems. By achieving these module learning outcomes, students will develop a strong foundation in engineering mechanics/statics and be equipped with the necessary knowledge and skills to analyze and solve a wide range of engineering problems involving static equilibrium and structural stability.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. 1. Introduction to Statics • Definition and scope of statics • Fundamental concepts and principles • Importance of statics in engineering 2. Vectors and Vector Analysis • Vector representation and operations • Vector components and coordinate systems • Vector addition, subtraction, and scalar multiplication 3. Forces and Moments • Forces and their characteristics • Resultant and equilibrium of forces • Moment of a force and its properties • Couples and their effects 4. Equilibrium of Rigid Bodies

- Free body diagrams and force analysis
 - Equations of equilibrium in two and three dimensions
 - Solving equilibrium problems using scalar and vector approaches
 - Applications to simple systems and structures
5. Truss Structures
- Introduction to truss analysis
 - Method of joints and method of sections
 - Determination of member forces and support reactions
6. Friction
- Laws of friction and frictional forces
 - Types of friction and their characteristics
 - Calculation of frictional forces and moments
 - Applications to inclined planes, wedges, and screws
7. Center of Gravity and Centroids
- Definitions and properties of center of gravity and centroids
 - Determination of center of gravity and centroids of simple shapes
 - Composite bodies and distributed loads
8. Moments of Inertia
- Moment of inertia and its physical significance
 - Calculating moments of inertia for simple shapes
 - Parallel-axis and perpendicular-axis theorems
 - Application of moments of inertia in engineering analysis

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies

Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering types of simple experiments involving some sampling activities that are interesting to the students.

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Objectives أهداف المادة الدراسية	1. Students will learn occupational safety in workshops and how to acts in the event of an electric shock. 2. Student will learn types of electrical conductors and methods of electrical installation. 3. Student will learn how use the contactor in some practical application. 4. Studying types of capacitors, inductances, semiconductors.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Principles of industrial security and occupational safety within the electricity workshops. 2. Dimensional measuring devices (MICROMETER). 3. characteristics of good installations, Types of electrical installations. 4. Practical electrical installation. 5. What is the electric coils, The different types of capacitor 6. Examine the types of semiconductors. 7. Instruct the student on how to design electronic circuits.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A – Occupational Safety</u> Learn about safety principles in electrical shops and how to act when a shock occurs.[6hr] <u>Part B – Tools</u>

	Learn about tools used in workshops and how to use a micrometer to measure the diameter of conductors.[6hr]
	<u>Part-C- Electrical installations[18hr]</u> Methods of electrical installations and how to connect the contactors <u>Part-D-Electronics:[15hr]</u> Types of capacitors , semiconductors (Diodes, transistors), Electronic circuits.

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1- Understanding: Occupational safety, methods of installations. 2-Practical experience: Installation, micrometers, electronic circuits.

Delivery Plan (Weekly Lab. Syllabus) المنهاج الأسبوعي للمختبر
--

Week	Material Covered
Week 1	Lab 1: Principles of industrial security and occupational safety within the electricity workshops, general safety rules and protection against electric shock.
Week 2	Lab 2: Learn about the tools used in electrical work shops.
Week 3	Lab 3: Dimensional measuring devices (MICROMETER
Week 4	Lab 4: Electrical installations, Systems conductors insulated, How to equip the house with electric power.
Week 5	Lab 5: characteristics of good installations, Types of electrical installations, Bus-Bar
Week 6	Lab 6: Practical electrical installation(one way switch control lamp, one way switch control two lamps series, one way switch control two lamps parallel).
Week 7	Lab 7: Practical electrical installation (two ways switch control parallel lamps, two lamps parallel with reciprocating control with two way switch, Staircase lamp)
Week 8	Lab 8: : Means of controlling motors (Contactor) The idea of its work and its construction.
Week 9	Lab 9 : Using contactor to operate a three phase motor.
Week 10	Lab 10: Types of fuses used in electrical circuits, the current that each types bears..
Week 11	Lab 11: What is the electric coil, how does it work and what are its types according to the type of cores.
Week 12	Lab 12: The different types of capacitor in terms of the type of insulator used between the plates of the capacitor, the voltage that the capacitor bears, reading capacitor values using different methods.
Week 13	Lab 13: Examine the types of semiconductors (diode, transistor, etc) and knowing the unemployed ones.
Week 14	Lab 14: Instruct the student on how to design electronic circuits on printed board and install electronic components on it (simple circuit)
Week 15	Lab 15: Review.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	1- Preparing the student to study electrical and electronic physics and the properties of electrical materials and semi-conductors. 2- Understanding the basic principles and physical laws related to the work and functions
--	--

Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1- Enable students to understand the basic principles of physics. 2- Solve physics problems using qualitative and quantitative reasoning including sophisticated mathematical techniques. 3- Understanding the scientific and theoretical basis for building circuits and various electronic devices, regardless of their level of development. 4- Identify the atomic and crystal structure of matter. 5- The course aims to prepare students in the next stage to easily accept lessons related to electronics. 6- Enable students to distinguish the properties of different materials such as metals, semiconductors and insulators. 7- The study material includes solved examples and exercises to apply mathematical and computational techniques. 8- Know the basic properties of x-rays. 9- reviewing the basic physics behind x-ray emission techniques. 10- know the characteristics of diodes and transistors. 11- Ability to describe the behavior of special purpose diodes. 12- Ability to analyze PN junctions in semiconductor devices under various conditions.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: Part 1: The atomic and crystal structure of matter. This part deals with the electrons in the atom, how the electron moves in the orbit, and the energy of the electron in the orbit. It also explains the crystalline structure and energy band structure and classifies materials into insulators, conductors and semiconductors. Part 2: Electrical conductivity in semiconductors. Explain electrical conductivity in a pure semiconductor and the mobility of electrons and holes in a semiconductor. Part 3: P-N junction The positive-negative junction is in thermal equilibrium and the effect of this junction is under forward and reverse bias. Part 4: characteristics of diodes and transistors. This part deals with the current-voltage relationship of a diode. This chapter includes an explanation of the structure and operation of the transistor. Part 5: X-rays and the basic principle of their generation .reviews the basic physics behind x-ray emission techniques

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	1-Hands-on Experiments: Engage students in practical experiments to deepen their understanding of physics principle. 2-Problem-solving Exercises: Include various problem to apply mathematical techniques in physics. 3-Group Projects: Assign collaborative projects for student. 4-Real-world Applications: Discuss the development in modern different devices and systems. 5-Interactive Discussions: Encourage student participation and critical thinking through open-ended questions. 6-Assessment Variety: Use diverse assessment methods to gauge student understanding. 7-Office Hours and Support: Offer individualized assistance through office hours or online support.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives	تهدف الديمقراطية وحقوق الإنسان للحفاظ على كرامة الفرد وحقوقه الأساسية وتعزيزها كما تحقيق العدالة الاجتماعية وتشجيع التنمية الاقتصادية والاجتماعية للمجتمع وتماسكه فضلاً عن توطيد الأمان الوطني وإرساء مناخ مؤات للسلام الدولي وذلك لأن حقوق الإنسان والديمقراطية مرجعاً أساسياً للجميع لحماية حقوق الإنسان؛ وهي توفر بيئة لحماية حقوق الإنسان وإعمالها إعمالاً فعلياً. واليوم، بعد مضي فترة على تحقيق الديمقراطية
-------------------	---

	في مختلف أنحاء العالم، يبدو أن العديد من النظم الديمقراطية تتراجع. ويظهر أن بعض الحكومات تعتمد إضعاف إجراء عمليات تحقق مستقلة بشأن سلطاتها، والقضاء على أي نقد، وتفكيك الرقابة الديمقراطية وضمان حكمها لمدة طويلة، مع أثر سلبي على حقوق الشعب. 1 - فهم ومعرفة وأدراك حقوقه التي أقرها الله له وللإنسان جميعاً وبالتالي فهي هبة وليس مكسب من أحد ولا يحق لأي شخص انتزاعها. 2- يعبر الطالب بأسلوبه الخاص عن هذه الحقوق ويدافع عنها. 3- تحليل الظواهر واعطاء التفسيرات لما يحدث امامه من انتهاك لحقوق الانسان وحرياته من خلال تحديد اوجه النقص او الثغرات الموجودة في ضوء المعلومات المتوفرة لديه 4- فهم اهم النظم السياسية والتي تعد ضمانه لحقوق الانسان وحرياته السياسية ومحاولة تطبيقه على ارض الواقع الا وهو النظام الديمقراطي.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	
Indicative Contents المحتويات الإرشادية	حقوق الانسان في التاريخ المعاصر والحديث: الاعتراف الدولي بحقوق الانسان منذ الحرب العالمية الأولى ❖ وعصبة الامم المتحدة (4 ساعات) حقوق الانسان، تعريفها، اهدافها وحقوق الانسان في الحضارات القديمة وخصوصا حضارة وادي الرافدين (6 ساعات) ❖ ضمانات واحترام وحماية حقوق الانسان على الصعيد الدولي: - دور الأمم المتحدة ووكالاتها المتخصصة في توفير الضمانات - دور المنظمات الاقليمية (الجامعة العربية، الاتحاد الأوربي، الاتحاد الافريقي، منظمة الدول الأمريكية، منظمة آسيان) ❖ دور المنظمات الدولية الاقليمية غير الحكومية والرأي العام في احترام وحماية حقوق الانسان (12 ساعة) ❖ المشاكل والمعوقات ونقاشات الطلبة (6 ساعات)

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	Unit one: Introduce yourself and others using am/are/is and my/your. Practice saying hello and goodbye in different situations. Unit two: Talk about your hobbies, interests and activities using he/she/they and his/her. Practice asking and answering questions. Unit three: Describe yourself and others using adjectives and nouns. Practice giving personal information. Unit four: Talk about your family and friends using possessive adjectives, possessive 's and has/have. Practice describing relationships and appearance. Unit five: Talk about your daily routine and habits using present simple with I/you/we/they, a and an. Practice telling the time and date. Unit six: Talk about your work or school life using present simple with he/she, questions, negatives and adverbs of frequency. Practice expressing likes and dislikes. Unit seven: Talk about your favorite things using question words, pronouns and this/that. Practice making comparisons and preferences. Unit eight: Talk about your home and neighborhood using there is/are and prepositions of place. Practice describing location and giving directions. Unit nine: Talk about your past experiences using was/were born and past simple with irregular verbs. Practice telling stories and biographies. Unit ten: Talk about your recent holidays or events using past simple with regular and irregular verbs, questions, negatives and ago. Practice narrating events in chronological order. Unit eleven: Talk about your abilities and skills using can/can't and adverbs. Practice making requests and offers. Unit twelve: Talk about your shopping habits and needs using some/any, like/would like and thank you. Practice ordering food and buying things.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Unit one: Student will be able to introduce himself and others in a polite and friendly way using basic grammar and vocabulary. Unit two: Student will be able to talk about his hobbies, interests and activities in simple sentences using subject pronouns and possessive adjectives. Unit three: Student will be able to describe himself and others using adjectives and nouns in positive and negative sentences. Unit four: Student will be able to talk about his family and friends using possessive adjectives, possessive 's and has/have in statements and questions. Unit five: Student will be able to talk about his daily routine and habits using present simple with I/you/we/they, a and an in affirmative and negative sentences. Unit six: Student will be able to talk about his work or university life using present simple with he/she, questions, negatives and adverbs of frequency in different contexts. Unit seven: Students will be able to talk about their favorite things using question words, pronouns and this/that in short answers and comparisons. Unit eight: Students will be able to talk about their home and neighborhood using there is/are and prepositions of place in descriptions and directions. Unit nine: Student will be able to talk about his past experiences using was/were born and past simple with irregular verbs in statements and questions. Unit ten: Student will be able to talk about his recent holidays or events using past simple with regular and irregular verbs, questions, negatives and ago in narratives and sequences. Unit eleven: Student will be able to talk about his abilities and skills using can/can't and adverbs in statements and questions. Student will also be able to make requests and offers using can/can't. Unit twelve: Students will be able to talk about their shopping habits and needs using some/any, like/would like and thank you in statements and questions. Student will also be able to order food and buy things using polite language.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: • <u>Part A – General meeting and introduction.</u> This section provides an overview of Hello, Am/Are/Is, My/Your, This is with Practice in Work, Your World, He/She/They, His/Her, Questions. [6 hrs] • <u>Part B Every day.</u> Vocabulary related to different topics. Possessive adjectives, Possessive's, Has/have, Adjective+ noun. Present simple I/you/we/they, A and an [10 hrs] • <u>Part C Time and event.</u> Present simple, Questions and negatives, Adverbs of frequency. Question words, Pronouns, This and that. There is/are..., Prepositions [8 hrs] • Revision problem classes [4 hrs]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	Building relationships and appreciating their culture: Teachers should take the time to learn about their students' cultures and backgrounds.
	Using actions and gestures to show what to do: Teachers can use nonverbal cues such as pointing, gesturing, and facial expressions to help students understand what they are trying to communicate.
	Planning lessons and using language objectives: Teachers should plan lessons that are appropriate for their students' language proficiency levels.
	Provide opportunities for students to work in pairs or small groups: Working in pairs or small groups can help students who are learning English as a new language practice their speaking skills in a less intimidating environment.
	Use visuals such as pictures, diagrams, and graphic organizers: Visuals can help students who are learning English as a new language understand complex concepts more easily.
	Provide opportunities for students to use technology: Technology can be used to support English-language learners by providing access to online resources such as videos, podcasts, and interactive activities.
	Encourage students to read widely: Reading widely can help students who are learning English as a new language improve their vocabulary and comprehension skills 2.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	1-Understanding the Fundamentals: The primary objective of a computer principal course is to provide students with a solid foundation in the fundamental principles of computer work. This includes concepts such as Hardware, Software and new technologies in computer area. 2-Analyzing the work of Components: Students will learn how does computer parts work and the parts of each of them. They will understand their behavior in normal condition and be able to calculate their effects on the overall performance of work. 3-Computer Specifications: Students will become familiar with important properties of each computer components and be able to install the proper hardware/software for their computer. 4-Laboratory Skills: The course includes hands-on laboratory experiments to provide students with practical experience of using Microsoft Office programs such as Word, PowerPoint, Excel and Access.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1-Fundamental Knowledge: Students will acquire a solid understanding of the fundamental concepts and principles of computer hardware components, including CPU, RAM, Storage Devices, Input and output devices. 2-Computer performance Skills: Students will be able to buy their own PC/Laptop in a manner that allow to use the full capability of the computer with less price. 3-Computer Software Skill: Students will be able to install computer drivers and the essential programs. 4-Through hands-on laboratory experiments, students will be able to write reports, homework and posters by using Word program, on the other hand they will be able to prepare presentations using PowerPoints program. Also, they will be able to use Excel and Access programs to solve equations and draw curves.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: • <u>Part A – Introduction to Computer.</u> Constituent the field of using computer, types of computers and their differences, The advantages and disadvantages of computers [8 hrs] • <u>Part B Computer Components.</u> CPU, RAM, Storage Devices, Input and Output devices [14 hrs] • <u>Part C Office programs</u> . Microsoft Word, Microsoft PowerPoint, Microsoft Excel and Microsoft Access. [32 hrs] • Revision problem classes [6 hrs]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	1- Hands-on Experiments: Engage students in practical experiments to deepen their understanding of circuits. 2- Videos: seeing videos for best understanding of components work. 3- Group Reports: Assign collaborative reports for new computer technology. 4- Interactive Discussions: Encourage student participation and critical thinking through open-ended questions. 5- Assessment Variety: Use diverse assessment methods to gauge student understanding. 6- Office Hours and Support: Offer individualized assistance through office hours or online support.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	The objectives of DC generators include: 1. To convert mechanical energy into electrical energy: DC generators are designed to convert mechanical energy, such as that produced by a turbine or an engine, into electrical energy. 2. To maintain a constant voltage output: DC generators are designed to maintain a constant voltage output, regardless of changes in the load or speed of the generator. 3. To provide a reliable source of power: DC generators are designed to provide a reliable source of power for a variety of applications, including industrial, commercial, and residential use. 4. To be efficient: DC generators are designed to be efficient, converting as much of the mechanical energy into electrical energy as possible.
--	--

	5. To be durable and long-lasting: DC generators are designed to be durable and long-lasting, with a lifespan of several decades or more. 6. To be easy to maintain: DC generators are designed to be easy to maintain, with simple maintenance procedures and readily available replacement parts. 7. To meet safety standards: DC generators are designed to meet safety standards for electrical equipment, including grounding and insulation requirements.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Upon completion of this module, learners should be able to: 1. Explain the basic operating principles of DC generators, including the role of the commutator and brushes. 2. Describe the different types of DC generators, including shunt, series, and compound generators. 3. Calculate the output voltage and current of a DC generator, based on its design parameters and load characteristics. 4. Analyze the performance characteristics of a DC generator, including its efficiency, voltage regulation, and speed control. 5. Identify common maintenance procedures for DC generators, including cleaning, lubrication, and inspection of electrical components. 6. Evaluate the safety risks associated with working with DC generators, and implement appropriate safety measures to prevent accidents or injuries. 7. Apply knowledge of DC generators to solve practical problems in industrial, commercial, or residential settings.
Indicative Contents المحتويات الإرشادية	1. Introduction to DC generators: basic principles, construction, and working. 2. Types of DC generators: shunt, series, and compound generators. 3. Voltage and current output calculations of DC generators. 4. Performance characteristics of DC generators: efficiency, voltage regulation, and speed control. 5. Maintenance procedures for DC generators: cleaning, lubrication, and inspection of electrical components. 6. Safety measures for working with DC generators: risk assessment, protective gear, and emergency procedures. 7. Applications of DC generators in various industries: power generation, transportation, and telecommunications.

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering types of simple experiments involving some sampling activities that are interesting to the students.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	1- Understanding the Basics: The primary objective of the Electronic Basic course is to provide students with a solid foundation in the basic principles of how electronic circuits work and how they are made from semiconductor materials. 2-Analyzing Circuit Components: Students will understand how the p-n junction is formed and how it is manufactured, as well as understanding and analyze the electronic circuits in which the diode is included, like as rectifier circuit , clipping circuit , clamper circuit, and others. the student will also learn the principle of operation of BJT transistor 3-Circuit Laws and Theorems: Students will become familiar with important laws and theorems governing the diode and transistor applications circuits. They will gain proficiency in applying these principles to solve complex circuit problems. 4-Circuit Simulation and Design: The course may involve introducing students to circuit simulation software. They will learn how to use simulation tools to analyze and design electronic circuits, verify their calculations, and gain practical insights into circuit behavior. 5-Problem-Solving Skills: An important objective is to develop students' problem-solving skills in the context of electronic circuits. They will learn how to analyze circuit diagrams, formulate appropriate strategies, and apply their knowledge to solve a variety of circuit problems efficiently. 6-Laboratory Skills: The course includes hands-on laboratory experiments to provide students with practical experience in building, testing, and troubleshooting electronic circuits.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1-Fundamental Knowledge: Students will acquire a solid understanding of the fundamental concepts and principles of electronic circuits that's contain diode and transistor. 2-Circuit Analysis Skills: Students will develop the ability to analyze electronic circuits such as rectifier circuit , clipping circuit , clamper circuits, Zener circuits , and amplifier circuits 3-Circuit Design and Simulation: Students will be able to design and simulate electronic circuits, using appropriate components and considering design constraints. They will learn to use circuit simulation software to verify their designs, analyze circuit performance, and troubleshoot circuit issues. 4-Laboratory Skills: Through hands-on laboratory experiments, students will develop practical skills in building, testing, and troubleshooting electronic circuits. They will become proficient in using measuring instruments, interpreting experimental data, and ensuring safety precautions while working with electrical circuits. 5-Critical Thinking and Analysis: The course will promote critical thinking and analytical skills among students. They will learn to evaluate different circuit solutions, analyze circuit behavior, and make informed decisions based on their understanding of electronic circuits. By the end of the course, students will possess a comprehensive knowledge of electronic circuits, enabling them to analyze, design, and troubleshoot a wide range of electrical circuits. They will be prepared for further studies in electrical engineering or related fields and equipped with skills that can be applied in professional practice.
Indicative Contents	Indicative content includes the following:

المحتويات الإرشادية	Part A – semiconductor device. The composition of the atoms and materials used in the manufacture of semiconductor materials and the specifications of each material. In addition to that, how to form the p-type semiconductor and the N-type semiconductor, and how to manufacture the diode. [12 hrs] Part B - diode circuits. Rectifier circuits, clipping circuits, clamper circuits. Multiplier circuits. [16 hrs] Part C - zener and transistor circuit zener regulator circuits, the LED circuit, the Photo diode circuit. And bjt circuits. [26 hrs] - Revision problem classes [6 hrs]
---------------------	--

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	1-Hands-on Experiments: Engage students in practical experiments to deepen their understanding of circuits. 2-Simulation Software: Use circuit simulation software for virtual circuit design and analysis. 3-Problem-solving Exercises: Include various problem-solving exercises to apply circuit analysis techniques. 4-Group Projects: Assign collaborative projects for circuit design and construction. 5-Real-world Applications: Discuss practical applications of circuits in different devices and systems. 5-Interactive Discussions: Encourage student participation and critical thinking through open-ended questions. 6-Conceptual Understanding: Focus on intuitive understanding alongside mathematical analysis. 7-Assessment Variety: Use diverse assessment methods to gauge student understanding. 8-Office Hours and Support: Offer individualized assistance through office hours or online support.

Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Objectives أهداف المادة الدراسية	Students will learn the principle of 1-transient AC and DC circuit 2- design the circuits which used to power electronics, motors, 3-and delay circuits applications. 4-Learn how to calculate and analyze voltage and current phasors in AC circuits, including their amplitudes, phases, and frequency relationships. 5-Explore the behavior and characteristics of AC circuit elements, such as resistors, capacitors, and inductors, and understand their roles in AC circuit analysis. 6-Investigate the concept of impedance in AC circuits and its relationship to resistance, reactance, and frequency. 7-Study the principles of AC power and power factor, including real power, reactive power, apparent power, and power factor correction.		

	8- Gain a comprehensive understanding of three-phase AC systems, including the generation, transmission, and distribution of power in three-phase circuits.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. 1-Knowledge Acquisition: Students will acquire a comprehensive understanding of the fundamental concepts and principles of Comparison of AC and DC transient circuit 2-Circuit Design and Analysis: Students will gain the ability to design and analyze Resonance A.c and Dc circuit heir knowledge of impedance, power factor, and component characteristics. They will learn to calculate voltage and current magnitudes, phase differences, and power relationships in AC circuits. 3- Quality Factor, Bandwidth and Half-Power Frequency in resonance circuits Students will be able to construct and interpret band width to visualize and analyze the behavior of voltages and currents in resonance circuits. 4-Three-Phase Systems: Students will acquire understanding of three-phase AC systems, including balanced and unbalanced configurations. Laboratory Skills: Students will develop practical skills in using circuit simulation software and laboratory equipment to design, analyze, and verify the performance of TRANSIENT AC and DC circuits.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: Part A – Definitions, units, and transient applications <u>General concept of UNITS and some application of transient system</u> [3 hrs] Part B – Unit step forcing function <u>General concept of applying UNIT step function for the electrical circuit</u> [4 hrs] Part C Transient analysis in DC circuit. Source free and step response RL and RC circuits in DC system. Comoplet response of a series and a parallel RLC circuits in DC system. [10 hrs] Part D Single - phase of AC Circuits. AC in resistive circuits, current and voltage in inductive circuits, current and voltage in capacitive circuits. Concept of complex impedance and admittance, AC series and parallel circuits. RL, RC and RLC circuit analysis and phasor representation. [14 hrs] Part E resonance of AC Circuits Resonance in A.c Series and parallel RLC Circuit ,Quality Factor (Q), Bandwidth and Half-Power Frequency in resonance circuits,Tank circuit and dynamic impedance in RLC circuit [14 hrs]

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1-Conceptual Understanding: Explain transient AC and DC circuits, introduce the concept of complete response of RL ,RC circuit, and highlight the significance of RLC series and parallel circuit and phases in AC circuits. 2-Mathematical Foundations: Provide a solid mathematical foundation for transient DC and AC circuits. Teach students the use of phasor notation to analyze AC circuits. 3-Problem-Solving Skills: Dedicate adequate time to problem-solving exercises and examples. 4-Laboratory Experiments: Incorporate laboratory experiments to reinforce theoretical concepts. Allow students to build and analyze AC circuits using oscilloscopes, function generators, and AC power sources. 5-Simulation Tools: Introduce simulation MATLAB software tools that allow students to simulate circuits and observe their behavior.

	6-Review and Assessment: Regularly review key concepts and provide formative assessments to gauge students' understanding. Offer constructive feedback on their performance to help them identify areas for improvement.

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives

أهداف المادة الدراسية

- To realize the operation principle of several sensors and recognize the key issues in selecting the right instrument.
- To be acquainted with several types of actuators.

	6. To understand modern signal transmission techniques and relevant standards. 7. To become aware of the sampling theorem, ADC and DAC.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	9. Knowledge of sensors, including types and operation principle. 10. Get to know the principle of Position sensors, their types and uses. 11. Get to know the principle of Temperature Sensors, their types and uses. 12. Apply acquired knowledge to the Acceleration & vibration sensors. 13. Get to know the principle of pressure Sensors. their types and uses. 14. Apply acquired knowledge to the speed sensors. 15. Specify and select appropriate sensors for a wide range of systems and applications. 16. Knowledge of actuators, including types and operation principle. 17. Apply acquired knowledge to the Transmitters. 18. Knowledge of ADC & DAC.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Sensors [16 hrs.] Position measurement • Limit switch o Proximity sensors o Potentiometer o LVDT o Encoders o Stress & strain measurement • Strain gauge o Temperature measurement • Metal strip o RTD o Thermistor o Thermocouple o Acceleration & vibration measurements • Pressure measurement • Speed measurement • Actuators [4 hrs.] Dc motor • Servo motor • Stepper motor • Solenoid • Transmitters [4 hrs.] Current transmitter 0-20 / 4-20 • Voltage transmitter 0-10 • Analog & Digital interfaces [4 hrs.] Sampling theorem • ADC • DAC •

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is interactive learning through the visualization via flow charts, graphic and pictures that helps students to receive the information in a simpler, clear and systematic way. Also, depending on group work by dividing student into small groups of mixed abilities. By doing so, those who have more knowledge of the

subject can share their knowledge and help their peers understand the topic better. Adapt Inquiry-Based learning to Encouraging learners to ask a lot of questions that does not only motivate students to think more practically but also helps them to become independent learners.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونواتج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	The applied mathematics curriculum aims to teach the student the principle of mathematics, lows , solve the equations and the electrical circuit.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Important: Write at least 6 Learning Outcomes, better to be equal to the number of study weeks. 19. Definition of differential equation, degree and order 20. Solve five type of ordinary differential equations 21. Laplace transform lows, properities 22. Inverse laplace transform 23. Second order differential equation, Homogenous, Non Homogenous 24. Operations on the vector 25. Types of coordinattees
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A - Fundamentals of applied mathematics</u> Introduction to basic concepts, functions, ends, vectors, trigonometric and inverse functions, derivatives, applications of derivatives, integration, methods of integration, matrices <u>Part B – Solve equations</u> Fundamental definitions,Solve five type of ordinary differential equations ,Laplace transform lows, properities,Inverse la place transform,Second order differential equation, Homogenous, Non Homogenous, vectors, coordinattees.
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials .

Module Evaluation

تقييم المادة الدراسية

As		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	6	10% (10)	5 and 11	LO #1, #2 and #7
	Assignments	12	10% (10)	2 and 12	LO #3, #4 and #6, #7
	Projects / Lab.				
	Report				
Summative assessment	Midterm Exam	2hr	10% (10)	7	LO #1 - #7
	Final Exam	3hr	50% (50)	15	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

Week	Material Covered
Week 1	Vectors type ,Addition ,subtraction ,scaller multiplication ,length of vector, Distance formula , compute angle between vectors and convert coordinates
Week 2	Introduction about the ordinary of differential equations ,Types, The order and degree of differential equations ,Separable of ordinary of differential equations
Week 3	Homogenous and Non Homogenous of ordinary of differential equations
Week 4,5	Exact and not exact of ordinary of differential equations
Week 6	Linear ordinary of differential equations
Week 7	Bernoullis Equations
Week 8	Solve equation about differential equation
Week 8	Second order differential equation, Homogenous, Non Homogenous
Week 9,10	Introduction to laplace transform,Lows, Properties of laplace transform
Week 11	Examples about Properties of laplace transform
Week 12	Inverse laplace transform,Lows ,examples
Week 13	Solve equation of inverse laplace using Simple real poles, Repeated real poles, Un repeated complex poles
Week 14	Final Examination

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	The aim of the module on English Language is to develop students' proficiency and confidence in using the English language for effective communication. The module aims to enhance students' language skills, including reading, writing, listening, and speaking, as well as their understanding of English grammar, vocabulary, and usage. The module also aims to foster intercultural competence and awareness of sociolinguistic variations in English.		
	Learning Outcomes: 1- Demonstrate proficiency in English language skills, including reading, writing, listening, and speaking. 2- Apply appropriate grammar, vocabulary, and usage in English language communication. 3- Analyze and comprehend a variety of written and spoken texts in English. 4- Produce coherent and well-structured written texts in English, demonstrating effective writing skills.		

	5- Engage in meaningful oral communication in English, demonstrating fluency, clarity, and effective presentation skills. 6- Develop intercultural competence and an understanding of sociolinguistic variations in English language use. Indicative Contents: English Language Skills Development: Development of reading skills, including comprehension and analysis of various text types. Enhancement of writing skills, including grammar, vocabulary, and coherent text production. Improvement of listening skills, including understanding spoken English in different contexts. Development of speaking skills, including fluency, pronunciation, and presentation techniques. English Grammar and Vocabulary: Review and application of grammatical structures and rules in written and spoken English. Expansion of vocabulary through the study of word formation, collocations, and idiomatic expressions. Reading Comprehension and Analysis: Practice in reading and understanding different types of texts, such as articles, essays, and literature. Analysis of texts for main ideas, supporting details, and implicit meanings. Writing Skills: Instruction and practice in various writing genres, such as essays, reports, letters, and creative writing. Emphasis on coherent paragraph and essay organization, thesis development, and effective sentence structures. Oral Communication and Speaking Skills: Practice in engaging in conversations, discussions, and presentations in English. Development of fluency, clarity, and effective communication strategies in spoken English. Intercultural Competence and Sociolinguistic Variations: Exploration of cultural aspects and intercultural communication in English-speaking contexts. Awareness of sociolinguistic variations, such as regional accents, dialects, and pragmatic conventions
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1- Demonstrate proficiency in reading, writing, listening, and speaking skills in English. 2- Apply accurate grammar, vocabulary, and language conventions in written and spoken English. 3- Comprehend and analyze a variety of written and spoken texts in English, including different genres and registers. 4- Produce well-structured and coherent written texts in English, demonstrating effective writing skills. 5- Engage in effective oral communication in English, demonstrating fluency, clarity, and appropriate presentation skills. 6- Exhibit intercultural competence and an understanding of sociolinguistic variations in English language use. 7- These learning outcomes are designed to enhance students' overall English language proficiency and enable them to effectively communicate in various contexts. They cover key language skills, including reading, writing, listening, and speaking, as well as the ability to apply grammar and vocabulary accurately. Students will also develop critical reading and analytical skills to comprehend and interpret different types of texts. Additionally, the learning outcomes emphasize the production of well-structured written texts and effective oral

	communication, while fostering intercultural competence and an appreciation of sociolinguistic variations in English language use.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: • <u>Unit one : Introduction to the English language.</u> • <u>Unit two : Getting to know you</u> • <u>Unit three: The way we live</u> • <u>Unit four: It all went wrong</u> • <u>Unit Five : Let's go shopping.</u> • <u>Unit six : What do you want to do?</u> • <u>Unit seven : Tell me What's it like?</u> • <u>Unit eight : Famous couples</u> • <u>Unit nine : Do's and don'ts</u> • <u>Unit ten : Going places</u> • <u>Unit eleven : Scared to death</u> • <u>Unit twelve : Things that changed the world</u> • <u>Unit thirteen : Dreams and reality</u>

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	1-Hands-on Experiments: Engage students in practical experiments to deepen their understanding of circuits. 2-Simulation Software: Use circuit simulation software for virtual circuit design and analysis. 3-Problem-solving Exercises: Include various problem-solving exercises to apply circuit analysis techniques. 4-Group Projects: Assign collaborative projects for circuit design and construction. 5-Real-world Applications: Discuss practical applications of circuits in different devices and systems. 5-Interactive Discussions: Encourage student participation and critical thinking through open-ended questions. 6-Conceptual Understanding: Focus on intuitive understanding alongside mathematical analysis. 7-Assessment Variety: Use diverse assessment methods to gauge student understanding. 8-Office Hours and Support: Offer individualized assistance through office hours or online support.

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	1. Understand the basic principles, construction, and working of DC motors. 2. Identify the different types of DC motors, including brushed and brushless motors, and their applications. 3. Calculate the torque and speed of DC motors using various equations and formulas. 4. Analyze the performance characteristics of DC motors, including efficiency, power factor, and speed control. 5. Develop an understanding of maintenance procedures for DC motors, including cleaning, lubrication, and inspection of electrical components. 6. Implement safety measures for working with DC motors, including risk assessment, protective gear, and emergency procedures. 7. Explore the various applications of DC motors in different industries, such as industrial automation, robotics, and electric vehicles.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Understand the basic principles, construction, and working of DC motors. 2. Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري	
Week	Material Covered
Week 1	DC motor, principle of dc motors torque develops in motor
Week 2	reverse direction of rotation – back e.m.f. equivalent
Week 3, 4	Circuit – calculation of torque – torque characteristics – speed characteristics
Week 5, 6, 7	Type of dc motor and their characteristics.
Week 8,9	Speed control of D.C. motor
Week 10	Losses in dc motor and generators swine brush test.

Week 11	Electric braking of D.C. motor
Week 12	Necessity of D.C. motor starter
Week 13	Testing of D.C. machines
Week 14	Losses in dc motor and generators swine brush test.
Week 14	Final Examination

Delivery Plan (Weekly Lab. Syllabus) المناهج الأسبوعي للمختبر	
Week	Material Covered
Week 1	Shunt Motor No Load Test
Week 2	Shunt Motor Characteristic
Week 3	Shunt Motor No Load Test
Week 4	Speed control of D.C shunt motor using Flux and Rheostatic control
Week 5	Speed Control of DC Shunt Motor Using Variable Supply Voltage
Week 6	Speed Control of DC series Motor Using Variable Supply Voltage
Week 7	DC Shunt Motor Load test
Week 8	DC Motor Load test
Week 9	Speed control for D.C motor, (Uncontrolled)
Week 10	Speed Control of DC Motor (Controlled Rectifiers)
Week 11	Load test of DC series motor and find the curves
Week 12, 13	Load test on DC cumulatively compounded motor
Week 14	Review

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Objectives أهداف المادة الدراسية	1- Understanding the Basics: The primary objective of the Electronic Basic course is to provide students with a solid foundation in the basic principles BJT , FET transistor and thyristor 2-Analyzing Circuit Components: Students will understand how transistors, and thyristors are formed, as well as understanding and analyzing the electronic circuits in which the transistors and thyrestors are included, like as biasing circuit, comparator circuits , amplifier circuits. 3-Circuit Laws and Theorems: Students will become familiar with important laws and theorems governing the transistor applications circuits. They will gain proficiency in applying these principles to solve complex circuit problems. 4-Circuit Simulation and Design: The course may involve introducing students to circuit simulation software. They will learn how to use simulation tools to analyze and design the electronic circuits, verify their calculations, and gain practical insights into circuit behavior. 5-Problem-Solving Skills: An important objective is to develop students' problem-solving skills in the context of electronic circuits. They will learn how to analyze circuit diagrams, formulate appropriate strategies, and apply their knowledge to solve a variety of circuit problems efficiently. 6-Laboratory Skills: The course includes hands-on laboratory experiments to provide students with practical experience in building, testing, and troubleshooting electronic circuits.
Module Learning Outcomes	1-Fundamental Knowledge: Students will acquire a solid understanding of the fundamental concepts and principles of electronic circuits that's contain thyristor and transistor.

مخرجات التعلم للمادة الدراسية	2-Circuit Analysis Skills: Students will develop the ability to analyze electronic circuits such as biasing circuits , comparator circuits , amplifier circuits 3-Circuit Design and Simulation: Students will be able to design and simulate electronic circuits, using appropriate components and considering design constraints. They will learn to use circuit simulation software to verify their designs, analyze circuit performance, and troubleshoot circuit issues. 4-Laboratory Skills: Through hands-on laboratory experiments, students will develop practical skills in building, testing, and troubleshooting electronic circuits. They will become proficient in using measuring instruments, interpreting experimental data, and ensuring safety precautions while working with electrical circuits. 5-Critical Thinking and Analysis: The course will promote critical thinking and analytical skills among students. They will learn to evaluate different circuit solutions, analyze circuit behavior, and make informed decisions based on their understanding of electronic circuits. By the end of the course, students will possess a comprehensive knowledge of electronic circuits, enabling them to analyze, design, and troubleshoot a wide range of electrical circuits. They will be prepared for further studies in electrical engineering or related fields and equipped with skills that can be applied in professional practice.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: • <u>Part A – transistor biasing.</u> DC biasing of BJT transistor and Q-point, Voltage-divider Bias , Emitter Bias, Base Bias, Emitter-Feedback Bias, Collector-Feedback Bias. [16 hrs] • <u>Part B - amplifier circuits.</u> Transistor as an amplifier, The Common-Emitter Amplifier, The Common-Collector Amplifier The Common-Base Amplifier Power Amplifier. [18 hrs] • <u>Part C - Thyristor and Other semiconductor devices (Diac, Triac , SCR)</u> Thyristor characteristic, the SCR circuit, the Triac circuit. And Diac circuit. [20 hrs] • Revision problem classes [6 hrs]

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

Week	Material Covered
1	DC biasing of BJT transistor and Q-point
2	Voltage-divider Bias , Emitter Bias
3	Base Bias
4	Emitter-Feedback Bias
5	Collector-Feedback Bias
6	Transistor as an amplifier , Operation Amplifier
7	The Common-Emitter Amplifier
8	The Common-Collector Amplifier
9	The Common-Base Amplifier
10	Power Amplifier
11	Thyristor
12,13	Other semiconductor devices (Diac, Triac , SCR)
14	SCR applications
15	Final examination

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

Week	Material Covered
1	<u>Lab 1: FET characteristics</u>
2	<u>Lab 2: Small signal Amplifier</u>
3	<u>Lab 3: Transistor Voltage-divider Biasing</u>
4	<u>Lab 4: Transistor Emitter Biasing</u>
5	<u>Lab 5: Transistor Base Biasing</u>
6	<u>Lab 6: Transistor Emitter-Feedback Biasing</u>
7	<u>Lab 7: Transistor Collector-Feedback Biasing</u>
8	<u>Lab 8: The Common Emitter Amplifier</u>
9	<u>Lab 9: The Common-Collector Amplifier</u>
10	<u>Lab 10: The Common-Base Amplifier</u>
11	<u>Lab 11: Thyristor and SCR characteristics</u>
12, 13	<u>Lab 12,13: Applying Multisim program to use it in electronic experiments</u>
14	<u>Lab 14: Review</u>

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	Students will learn the principle of ; 1. Write circuit first order and second order equations for coupled system 2. Analyze circuits containing ideal transformers 3. Derive two port parameter descriptions for circuits.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1-Knowledge Acquisition: Students will acquire a comprehensive understanding of the fundamental concepts and principles of Write circuit first order and second order equations circuit 2-Circuit Design and Analysis: Students will gain the ability to design and analyze Resonance A.c and Dc circuit their knowledge of impedance, power factor, and component characteristics. They will learn to calculate voltage and current magnitudes, phase differences, and power relationships in AC circuits. 3-Analyze circuits containing ideal transformers(Laplas transformation and Fourier transformation) 4-Hybrid Systems: Students will acquire understanding of hybrid two port network systems, including balanced and unbalanced configurations. Laboratory Skills: Students will develop practical skills in using circuit simulation software and laboratory equipment to design, analyze, and verify the performance of different circuits.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: • <u>Part A – Application of laplace transform to circuit analysis.</u> <u>Solve the second order differential equation using laplas transformation and</u> Application of Laplace transform to circuit analysis. [6 hrs] • <u>Part B – Frequency selective circuits</u> <u>Design the passive and active filter select the correct frequency for design</u> [4 hrs] • <u>Part C Transient analysis in DC circuit.</u> Source free and step response RL and RC circuits in DC system. Comoplet response of a series and a parallel RLC circuits in DC system. [10 hrs] • <u>Part D Sinusoidal frequency analysis.</u> AC in resistive circuits, current and voltage in inductive circuits, current and voltage in capacitive circuits. Concept of complex impedance and admittance, AC series and parallel circuits. RL, RC and RLC circuit analysis and phasor representation. [14 hrs] • <u>Part E Two-port networks and Hybrid parameter</u> Two-port networks: (impedance, admittance, transmissions parameters, relationships between parameters, interconnection between networks). [14 hrs]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	1-Conceptual Understanding: Explain transient AC and DC circuits, introduce the concept of complete response of RLC circuit, and highlight the significance of RLC series and parallel circuit and phases in AC circuits. 2-Mathematical Foundations: Provide a solid mathematical foundation for transient DC and AC circuits. Teach students the use of LAPLAS Transformation to analyze circuits. 3-Problem-Solving Skills: Dedicate adequate time to problem-solving exercises and examples. 5-Simulation Tools: Introduce simulation MATLAB software tools that allow students to simulate circuits and observe their behavior. 6-Review and Assessment: Regularly review key concepts and provide formative assessments to gauge students' understanding. Offer constructive feedback on their performance to help them identify areas for improvement.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	1. This course deals with define Measurement. 2. Knowledge of measurement errors, their types, their effect on measurements, and how to reduce their effect on measurements. 3. Introduce the Units and standard SI system.
--	---

	4. Knowledge the Classification of Instruments. 5. Various Measurements, method for determining resistance, inductance and capacitance. 6. Know the system measurement. 7. High voltage measurements and testing.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Important: Write at least 6 Learning Outcomes, better to be equal to the number of study weeks. 38. Develop the knowledge of theoretical and mathematical principles of electrical measuring instruments. 39. Have knowledge and critical understanding of the well-established principles underpinning measurement. 40. Have knowledge and critical understanding of the well-established principles of measurement and instrument design. 41. Have an understanding of measurement's errors. 42. Understand the role of various factors in calibration. 43. Choose the proper type and specification of measuring procedure and measuring instruments for different plication. 44. Have an understanding of Statistical analysis. 45. Understand the working of various potentiometers, instruments for measurement of R, L and C. 46. Understand the high voltage measurements principles and method of works.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A - Fundamentals of Electronic Measurements and Instrumentation</u> D.C circuits, Current and voltage definitions, circuit elements, Combining resistive elements in series and parallel Ohm's law. Resistive networks, voltage and current sources, Thevenin equivalent circuits, current and voltage division, Capacitance and inductance RL, RC and RLC circuits <u>Part B - Measurements</u> Fundamental definitions, Measurements units, error of Measurements, Statistical analysis, D.C. measurement instrument. Ohmmeter as measurement instrument, Alternating - current indicating instruments, Electrodynamometer and application. Bridges, applications of D.c. Bridges, applications of A.c Bridges. Oscilloscope. High voltage measurement and its applications in electrical engineering techniques.
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering types of simple experiments involving some sampling activities that are interesting to the students.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	To help students to understand the engineering analysis transformations in complex frequencies domains, in order to solve complicated mathematical and electrical circuits.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	The specific learning outcomes of a module on Engineering Analysis may vary depending on the institution and the specific curriculum. However, here are some common learning outcomes that can be expected from such a module:

	1. Understanding of Mathematical Concepts: Develop a strong understanding of fundamental mathematical concepts and their applications in engineering analysis, including calculus, linear algebra, differential equations, and numerical methods. 2. Problem Solving Skills: Develop the ability to apply mathematical techniques and engineering principles to solve complex problems in various areas of engineering, such as mechanics, thermodynamics, fluid dynamics, electrical circuits, and structural analysis. 3. Analytical Thinking: Enhance analytical thinking skills to analyze engineering problems, break them down into manageable components, and apply appropriate mathematical and computational methods to find solutions. 4. Mathematical Modeling: Acquire skills in formulating engineering problems as mathematical models, identifying relevant variables and parameters, and selecting appropriate mathematical methods to solve these models. 5. Data Analysis: Gain proficiency in analyzing and interpreting data obtained from experiments or simulations, including statistical analysis, curve fitting, and error analysis.
Indicative Contents المحتويات الإرشادية	1.The indicative contents of an Engineering Analysis module can vary depending on the institution and the specific curriculum. However, here are some common topics and areas of study that are typically covered in an Engineering Analysis course: 2.Mathematical Foundations: 3. Calculus: Differentiation, integration, limits, and series expansions. 4.Linear Algebra: Vectors, matrices, systems of linear equations, eigenvalues, and eigenvectors. 5.Differential Equations: Ordinary differential equations, partial differential equations, and their solutions.
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	When conducting engineering analysis, there are several strategies that can be employed to ensure accurate and effective results. Here are some common strategies used in engineering analysis: 1. Problem Definition: Clearly define the problem statement, including the objectives, constraints, and any specific requirements. This step helps ensure that the analysis is focused and targeted towards the desired outcome. 2. Simplification and Assumptions: Complex engineering problems can often be simplified by making reasonable assumptions. 3. Mathematical Modeling: Formulate the engineering problem as a mathematical model, incorporating relevant equations, boundary conditions, and input parameters. 4. Verification and Validation: Verify the accuracy and reliability of the analysis by comparing results with known solutions, experimental data, or established analytical models. 5. Sensitivity Analysis: Perform sensitivity analysis to assess how changes in input parameters or assumptions affect the analysis results. 6. Data Analysis and Interpretation: Analyze and interpret data obtained from experiments, simulations, or measurements. 7. Documentation and Reporting: Document the analysis methodology, assumptions, and procedures followed. Present the results and findings in a clear and concise manner, using appropriate visualizations, tables, and graphs. 8. Iterative Approach: Engineering analysis often involves an iterative approach, where initial results are analyzed, and the analysis is refined or modified based on the findings. 9. Continuous Learning and Improvement: Stay updated with the latest advancements in engineering analysis techniques, software tools, and best practices.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Objectives أهداف المادة الدراسية	The aim of the module on English Language is to develop students' proficiency and confidence in using the English language for effective communication. The module aims to enhance students' language skills, including reading, writing, listening, and speaking, as well as their understanding of English grammar, vocabulary, and usage. The module also aims to foster intercultural competence and awareness of sociolinguistic variations in English.
	Learning Outcomes: 7- Demonstrate proficiency in English language skills, including reading, writing, listening, and speaking. 8- Apply appropriate grammar, vocabulary, and usage in English language communication. 9- Analyze and comprehend a variety of written and spoken texts in English. 10- Produce coherent and well-structured written texts in English, demonstrating effective writing skills. 11- Engage in meaningful oral communication in English, demonstrating fluency, clarity, and effective presentation skills. 12- Develop intercultural competence and an understanding of sociolinguistic variations in English language use.
	Indicative Contents: English Language Skills Development: Development of reading skills, including comprehension and analysis of various text types. Enhancement of writing skills, including grammar, vocabulary, and coherent text production. Improvement of listening skills, including understanding spoken English in different contexts. Development of speaking skills, including fluency, pronunciation, and presentation techniques. English Grammar and Vocabulary: Review and application of grammatical structures and rules in written and spoken English.

	Expansion of vocabulary through the study of word formation, collocations, and idiomatic expressions. Reading Comprehension and Analysis: Practice in reading and understanding different types of texts, such as articles, essays, and literature. Analysis of texts for main ideas, supporting details, and implicit meanings. Writing Skills: Instruction and practice in various writing genres, such as essays, reports, letters, and creative writing. Emphasis on coherent paragraph and essay organization, thesis development, and effective sentence structures. Oral Communication and Speaking Skills: Practice in engaging in conversations, discussions, and presentations in English. Development of fluency, clarity, and effective communication strategies in spoken English. Intercultural Competence and Sociolinguistic Variations: Exploration of cultural aspects and intercultural communication in English-speaking contexts. Awareness of sociolinguistic variations, such as regional accents, dialects, and pragmatic conventions
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	8- Demonstrate proficiency in reading, writing, listening, and speaking skills in English. 9- Apply accurate grammar, vocabulary, and language conventions in written and spoken English. 10- Comprehend and analyze a variety of written and spoken texts in English, including different genres and registers. 11- Produce well-structured and coherent written texts in English, demonstrating effective writing skills. 12- Engage in effective oral communication in English, demonstrating fluency, clarity, and appropriate presentation skills. 13- Exhibit intercultural competence and an understanding of sociolinguistic variations in English language use. 14- These learning outcomes are designed to enhance students' overall English language proficiency and enable them to effectively communicate in various contexts. They cover key language skills, including reading, writing, listening, and speaking, as well as the ability to apply grammar and vocabulary accurately. Students will also develop critical reading and analytical skills to comprehend and interpret different types of texts. Additionally, the learning outcomes emphasize the production of well-structured written texts and effective oral communication, while fostering intercultural competence and an appreciation of sociolinguistic variations in English language use.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: • <u>Unit one : Introduction to the English language.</u> • <u>Unit two : Getting to know you</u> • <u>Unit three: The way we live</u> • <u>Unit four: It all went wrong</u> • <u>Unit Five : Let's go shopping.</u> • <u>Unit six : What do you want to do?</u> • <u>Unit seven : Tell me What's it like?</u> • <u>Unit eight : Famous couples</u> • <u>Unit nine : Do's and don'ts</u> • <u>Unit ten : Going places</u> • <u>Unit eleven : Scared to death</u>

	- Unit twelve : Things that changed the world - Unit thirteen : Dreams and reality
--	---

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	1-Hands-on Experiments: Engage students in practical experiments to deepen their understanding of circuits.
	2-Simulation Software: Use circuit simulation software for virtual circuit design and analysis.
	3-Problem-solving Exercises: Include various problem-solving exercises to apply circuit analysis techniques.
	4-Group Projects: Assign collaborative projects for circuit design and construction.
	5-Real-world Applications: Discuss practical applications of circuits in different devices and systems.
	5-Interactive Discussions: Encourage student participation and critical thinking through open-ended questions.
	6-Conceptual Understanding: Focus on intuitive understanding alongside mathematical analysis.
	7-Assessment Variety: Use diverse assessment methods to gauge student understanding.
	8-Office Hours and Support: Offer individualized assistance through office hours or online support.
